

WORKING WITH TWO-PACK ISOCYANATE PAINTS

Isocyanates are used
as hardening agents

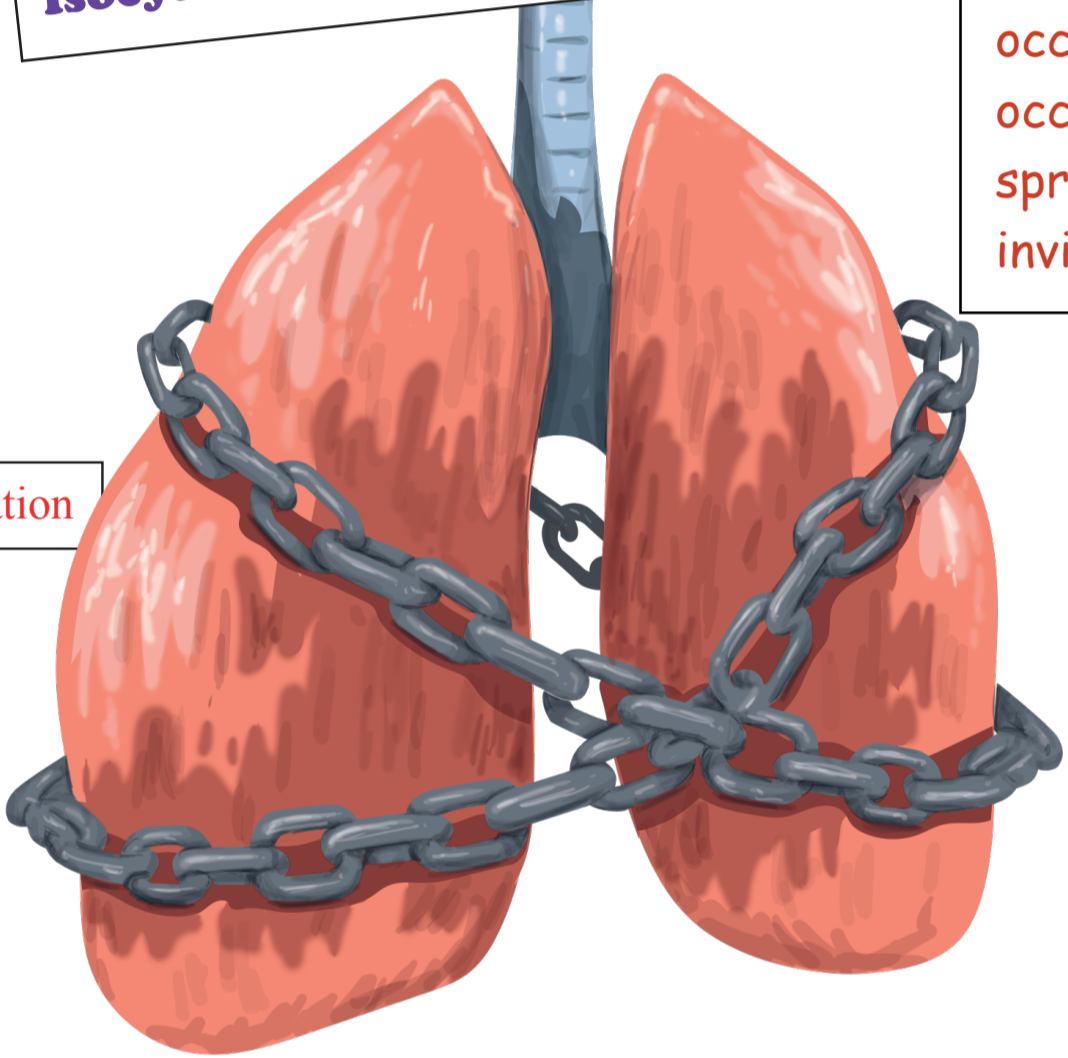

Isocyanates are **TOXIC** substances

To create a painted surface
highly resistant to weather
as well as wear and tear

The risk of developing
occupational e.g. asthma
occurs because paint
spraying produces a lot of
invisible airborne mist!

Lung sensitisation

Isocyanates
and solvents
can cause short
term effects
(e.g. eye
irritation, dry
skin) and the
long term
health effects
(asthma,
dermatitis)

- THE EARLY SIGNS OF ASTHMA**
- Chest tightness, often outside working hours
 - Persistent cough
 - Recurring blocked or runny nose
 - Recurring sore or watering eyes
 - Wheezing
 - Breathlessness
 - Flu-like shivers

**AIR FED MASK
SHOULD BE WORN
WHEN SPRAYING**
